

PROJECT REPORT

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

1. INTRODUCTION

1.1 Project Overview

This project automates the standard laptop procurement workflow using ServiceNow Flow Designer. After approval, a Catalog Task is created with the short description "Laptop needs to be configured" and assigned to the Hardware group.

1.2 Purpose

Reduce manual procurement work, prevent missed or delayed configuration tasks, assign work to the correct team, and improve process efficiency.

2. IDEATION PHASE

2.1 Problem Statement

The existing IT procurement process is largely manual. The laptop configuration step can be missed or delayed, increasing user waiting time and IT effort.

2.2 Empathy Map Canvas

Users need timely laptop configuration; they expect a simple request process; the IT team needs organized task handling. Key pain points are manual task creation and possible delays.

2.3 Brainstorming

Use Flow Designer; trigger from Service Catalog; create a Catalog Task after approval; set task description; assign to Hardware; connect the flow to Standard Laptop.

3. REQUIREMENT ANALYSIS

3.1 Customer Journey map

Request Standard Laptop → Approval → Flow Trigger → Catalog Task Created → Hardware Assignment → Laptop Configuration

3.2 Solution Requirement

ServiceNow, Flow Designer, Standard Laptop catalog item, Service Catalog trigger, Create Catalog Task action, Requested Item mapping, Hardware assignment, Approved condition.

3.3 Data Flow Diagram

User → Service Catalog → Approval → Flow Designer → Create Catalog Task → Hardware Group → Configuration. This is a logical representation because no original graphical DFD was supplied.

3.4 Technology Stack

ServiceNow; Flow Designer; Service Catalog; Catalog Task; Hardware assignment group.

4. PROJECT DESIGN

4.1 Problem Solution Fit

Flow Designer directly automates the manual configuration-task step after approval.

4.2 Proposed Solution

Create and activate Standard Laptop Task; trigger from Service Catalog; create Catalog Task; set description; assign Hardware; attach flow to Standard Laptop; place and approve a request; verify the generated task.

4.3 Solution Architecture

Service Catalog Request → Approval → Flow Designer → Create Catalog Task → Hardware Assignment → Configuration.
No separate frontend/backend/database/API layer is described.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Milestone 1: create the flow. Milestone 2: assign the flow to Standard Laptop. Milestone 3: place and approve the Service Catalog request and verify the Catalog Task.

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

The source describes functional verification but gives no measured response time, throughput, or load-test results. Therefore numerical performance values are not claimed. Functional checks include request creation, approval, task creation, Hardware assignment, and description verification.

7. RESULTS

7.1 Output Screenshots

Insert actual screenshots for Flow Designer, Standard Laptop catalog item, approval/requested item, and generated Catalog Task. The supplied source did not include these screenshots.

8. ADVANTAGES & DISADVANTAGES

Advantages

Less manual work; fewer missed configuration tasks; automatic Hardware assignment; better process consistency; improved efficiency.

Disadvantages / Limitations

Depends on correct ServiceNow configuration; required catalog item and assignment group must exist; incorrect flow/approval settings can stop task creation; no quantitative performance results are supplied.

9. CONCLUSION

The ServiceNow Flow Designer automation makes standard laptop procurement simpler and more organized by creating and assigning the required configuration task after approval.

10. FUTURE SCOPE

Notifications, SLA/escalation handling, automation for additional hardware items, and procurement dashboards can be added.

11. APPENDIX

Source Code: No separate source code supplied; configuration procedure is documented. Dataset: Not applicable.
GitHub/Demo: Not supplied.
